5mm

Blunt Dissector

An atraumatic instrument for safe and careful tissue dissection during laparoscopic surgery.

5mm Blunt Dissector

A blunt instrument used to define surgical planes and expose structures during laparoscopic surgery.

The small atraumatic tip allows the gentle dissection and manipulation of tissue while protecting delicate anatomical structures from the risk of traumatic injury.

The 5mm blunt dissector is a versatile instrument with multiple applications across various laparoscopic specialities.

**Rigid instrument shaft is non-conductive
to prevent direct coupling from
electrosurgical instruments**

**Two working lengths
available: 41cm and 46cm**

**100% cotton wool tip for a soft and atraumatic
instrument to prevent tissue damage**

**Tip is non-linting to prevent any material from being
left in the patient**

**Cotton wool tip is dipped in radio translucent
substance to ensure tip shows up under x-ray and
CT scan**

**Absorbent tip material allows for quick and effective
control of small bleeds**

Product	Ordering Code	Working Length	Box Qty
5mm Blunt Dissector – 3 dissectors per pack	BD001	41cm	20 packs
